

# STRAY SAGA

PRODUCT REQUIREMENT DOCUMENT • PHASE 2 BACKLOG

DOCUMENT SCOPE: POST-IMPLEMENTATION  
BACKLOG

TARGET STATE: PHASE 2 SPRINTS

Following the successful direct code integration of Phase 1 mechanics (including base survival calculations, archetype traits, turn-based Action Point grids, and typewriter event components), this product architecture layout defines the remaining uncompleted roadmap items. This document serves as the implementation guide for your next development pass.

## 1. UI & VISUAL POLISH ARCHITECTURE (UIX)

These requirements address current interface rendering bugs and remaining asset integration tasks to provide a clean visual presentation layer across all devices.

### REQ-UIX-01: CHARACTER ENCODING & RIBBON PASS

ACTIVE FIX

*Cleans character representation bugs appearing under dynamic selections.*

- **Encoding Standard:** Enforce strict UTF-8 parsing rules systematically across all story data JSON sets, rendering surfaces, and text translation utilities.
- **Mojibake Elimination:** Identify the target text fields inside the active selection ribbon card and replace any corrupted glyph artifacts or string symbols with completely clean, native text literals.

### REQ-UIX-02: UNIFIED SKEUOMORPHIC BUTTON FRAMING

BACKLOG

*Applies thematic retro game framing styles to simple system interfaces.*

- **Visual Harmonization:** Upgrade secondary interactive elements (such as "Next" text blocks, step navigation buttons, and tab headers) to replace modern unstyled options.
- **Asset Dressing Rules:** Wrap target text blocks inside clean 1px pixel borders or subtle gold-leaf accent headers to seamlessly blend standard control tools with large stylized artwork backgrounds.

## 2. ADVANCED RPG MECHANICS EXPANSION (RPG)

These pending features introduce deeper tactical challenges, moving hazard variables, and inventory item usage across the map exploration phase.

### REQ-RPG-01: DYNAMIC MOVING ENVIRONMENTAL HAZARDS

[BACKLOG](#)

*Introduces patrolling threat entities onto the node-based exploration grid.*

- **Hazard Entities Tracking:** Construct an independent coordinate tracking model representing a moving threat instance (e.g., a "Rival Cat" or "Barking Dog" map token).
- **Turn-Based Traversal Routine:** Integrate directly with your map step loop; for every 2 turn counts or movements registered by the player, move hazard entities to an adjacent connected node index automatically.
- **Collision Resolution:** If the player token coordinate index matches a hazard coordinate structure, instantly intercept exploration to drop player Energy/Warmth resources or initialize an immediate tactical dialogue skill gate.

### REQ-RPG-02: ACCESSORY SLOT & EQUIPMENT APPLICATION LOGIC

[BACKLOG](#)

*Powers long-term equipment bonuses found during runs.*

- **Inventory Classification:** Expand your runtime storage structure to cleanly differentiate single-use consumable food assets from persistent equippable item properties.
- **Equipment State Logic:** Create an option within the current interface to allow players to actively select and equip an accessory (e.g., the "Lost Red Collar").
- **Global Modifier Engine:** When an item is marked as equipped, apply a persistent +10% modifier bonus tracking directly across all trust-gaining mechanics during the active playthrough.

## 3. NARRATIVE & SENSORY DELIVERY (SND)

These requirements build atmospheric immersion during exploration and key milestone scenes.

## REQ-SND-01: LAYERED CROSSFADE SOUNDSCAPE MODULE

BACKLOG

*Controls natural volume level transitions for sound assets based on active grid indices.*

- **Contextual Ambient Fading:** Integrate an audio management system that reads region updates to smoothly crossfade multiple soundtrack files instead of hardcutting sound clips.
- **Zone Profiles Configuration:**
  - *The Alley Stage Zone:* Loop low, wind-howling sounds mixed with low-pass traffic hums.
  - *Discovery Event Nodes:* Mix in bright synthesized woodwinds or acoustic plucks when resting at designated sanctuary blocks.
  - *The Cottage Steps Boundary:* Fade down standard outdoor loops entirely and crossfade into cozy piano chords layered with soft fireplace sounds upon clearing the map.
